I want to extract the Title, PDF Version and number of Pages using pyPDF(pyhton), but I am unable to extract the title of the PDF File. Below is the code I tried `import cStringIO import pyPdf workbook = pyPdf.PdfFileReader(BytesIO(response.content)) workbook.recursive_down_load(full_path + '/' + __name__) doc = workbook.getDocument() workbook.recursive_down_load(full_path + '/' + doc.unfilteredtext) workbook.recursive_down_load(full_path + '/' + doc.unfilteredtext.title)` but the code is not giving the correct result. Title : 2D Finite Element Analysis of a Submarine Zippie-Groenewegen model for the surface water waves. PDF/A version: ISO 32000-1 Size (in bytes) : 2117500 (211.754 KB) A: Looking at the PdfFileReader Documentation, it says that when you down load a file it will only give you the filenames of each page. You will have to read each page yourself and extract the title from it. Docs
