What's New In AutoCAD?

Drop support in AutoCAD LT AutoCAD LT 1.0 is now obsolete. Legacy drawings created in AutoCAD LT 1.0 will no longer be supported in AutoCAD LT 2.0. Download the latest AutoCAD LT or AutoCAD LT 2020. AutoCAD LT 2020 is available as a free download. Verify for Inkscape to provide more functionality and usability for drawing in vector format Verify for Inkscape to add features that will make your experience with drawing in vector format more consistent with your experience in AutoCAD. For example, verifying for Inkscape will make it easier to create or edit graphic design files (PSD, SVG, etc.) in AutoCAD. Geometry validation and 2D feature ID calculation in multiple dimension styles With geometry validation and feature ID calculation in multiple dimension styles, you can easily create a drawing in a plan view or elevation view with no tedious re-calculation of feature IDs and feature locations when you change your view. For example, you can create plans and elevations in 2D multiple dimension styles to make them more consistent with how they appear in AutoCAD. AutoCAD Architecture Export to SWF You can now export a drawing to an SWF file for easy sharing with others and for importing into other AutoCAD applications. Improved segment formatting in areas The rules for formatting segments to specify area and line width are much simpler now. You can also choose a base line style for alignments that includes a consistent base line and an ability to specify a font style for display strings. The results of these formatting changes are particularly noticeable when you zoom in to a close-up view of an area. The following video demonstrates how this new formatting works. A new way to make simple construction lines You can now use one of the new commands—SECTION—to create a single continuous line that represents one or more construction lines. Vertical and horizontal reference lines with a function key The option to display the horizontal and vertical reference lines is now available as a function key. In addition, AutoCAD 2023 supports the ability to display the horizontal and vertical reference lines separately with different lengths. (video: 3:10 min.)
