Software An extended overview of the AutoCAD range of software is found on the Autodesk website. Historical overview Before AutoCAD was created, people used various drawing packages, usually more advanced than simple simple line drawing tools. Windows-based design packages such as CAD systems by Hermann & Scharwath, Standard CompuDesign, Bentley Systems, Adobe Computer Graphics, and Alias Systems were available. Each of these offered a different set of tools for the design and drafting tasks. CAD in the 1980s (with the introduction of the term CAD by Charles Atchley) was the generic name for these CAD programs. The first known person to write a CAD system was Edwin Catmull, an employee of Disney, who in 1984 developed the first sketching program, "SimView", for the Atari 8-bit family. Catmull's SimView used a state-machine to decide what to draw. Xycing was developed by Klaus Stahlmann in 1987 at the Karlsruhe Institute of Technology and appeared on the Arpanet, before it was commercialized as the AutoCAD product. Xycing was based on the Berkeley Graphics Language (BGL) and XWindow. AutoCAD 1.0, released in 1989, was the first major user-level CAD system that allowed the direct use of Windows ca3bfb1094
